Dr. Kwang Yul Cha is a visionary entrepreneur and physician, and founder of CHA Health Systems (CHS), a premier health-care enterprise in Korea. Under his leadership, CHS has become a dynamic global health-care group that owns and operates the Hollywood Presbyterian Medical Center; ten hospitals throughout Korea; CHAUM, a revolutionary anti-aging center; and fertility treatment and research centers in the U.S., Japan and Korea. In addition, Dr. Cha formed CHA Bio & Diostech, one of the largest biotech, stem-cell companies in Korea; more than two dozen bio-venture and health-care investment companies; the Sung Kwang Medical Foundation and CHA University and medical school. He pioneered the world’s first successful pregnancy and birth through in vitro maturation from immature oocytes and conducted the first birth with frozen oocytes utilizing the oocyte vitrification technique using grid.

Dr. Cha is highly respected as one of the pioneers in the field of regenerative medicine and is currently leading the effort to create one of the world’s largest bio-technology complexes for research and product development, including stem-cell therapies.
