Current Research Topics Under Investigation

Gain valuable research experience with children and families! Our research project aims to support the health and well-being of LA county's most vulnerable children and families. In our examination of risk and resilience, we employ methodologies such as infant EEG and eye tracking. We also gather information on challenging experiences, family functioning, and children's socio-emotional and cognitive development with children as young as 2 months to 3 years old.

Specific Qualifications for Research Assistants

The Levitt Lab in the Division of Research on Children, Youth and Families at Children’s Hospital, Los Angeles is looking for a highly motivated undergraduate student, preferably conversant in Spanish, with a strong interest in pursuing a graduate education.

As a research assistant, you would gain valuable experience working with high-risk families, prepping study materials, processing biological samples, attend recruitment outreach meetings, community engagement and much more! You can either get psychology class credit, work study or simply volunteer. Psychology majors preferred.

Desired Qualifications for Research Assistants

- Spanish conversational skills a plus
- Prior research experience
- Experience working with families
- Some knowledge of research methods

Office Location: Children’s Hospital Los Angeles, The Saban Research Institute, 4641 Sunset Blvd., Los Angeles, CA, 90027
