The Wrigley Marine Science Center is also proud to host its newest resident, the Hawaiian Bobtail Squid.

The WMC has recently established a research program in biogeochemistry, focusing on carbon sequestration in marine systems. This program aims to understand the processes that govern the sequestration of carbon in marine ecosystems and how they can be optimized to reduce greenhouse gas emissions.

The WMC is also home to the Global Environmental Mentoring and Education (GEM) program, which provides mentorship to undergraduate students from diverse backgrounds and institutions. The GEM class typically includes 16 mostly marginalized groups to STEM fields, and the GEM class is a central part of that commitment. The GEM class is a central part of that commitment. The GEM class is a central part of that commitment.

The GEM class is a central part of that commitment. The GEM class is a central part of that commitment. The GEM class is a central part of that commitment. The GEM class is a central part of that commitment. The GEM class is a central part of that commitment. The GEM class is a central part of that commitment.
