TOPLINE RESULTS – The LABarometer Wildfire Survey

Release Date: April 10, 2025. Field dates: February 1, 2025 – March 30, 2025.

Sample: 1,360 Los Angeles County residents (72.2% response rate)

Margin of Sampling Error¹: 2.5 percentage points

Full survey codebook and data are at <https://uasdata.usc.edu/survey/UAS+691>. The tables report weighted row percentages (or medians), observations, and response margin of error.

This survey asks about your attitudes, habits, and living conditions in Los Angeles. Thank you for your participation in this important study about where we live.

¹ Factors other than sampling error, including question wording, question order, sample type (e.g. opt-in panels vs. probability panels such as UAS), population coverage, and impact of current events, may affect the results of any survey. In addition, the results of questions asked without an interviewer (e.g. in an internet panel) may differ somewhat from similar questions asked by an interviewer over the phone. The margin of sampling error is calculated at the 95% confidence level, using a sample proportion of 0.5 to generate an upper bound of uncertainty. Please note that this is only an approximate measure of error. Precise measures for each individual question or outcome are included in the tables in the “MOSE” column.

Survey introduction:

In January 2025, Los Angeles experienced a series of devastating wildfires and an intense windstorm that caused damage and pollution in the region. The following survey asks about your experiences of the January wildfires and how you've been doing since the wildfires. We are asking these questions of people across the LA area. We know people have had very different experiences, some of them stressful or traumatic, others less so. We feel it is important to capture and represent all of these experiences, to help inform policy and communications in the future.
