TOPLINE RESULTS – WAVE 6 – The LABarometer Mobility and Sustainability Survey

Release Date: May, 2025. Field dates: February 20, 2026 – May 10, 2026.

Sample: 1,280 Los Angeles County residents (71% response rate)

Margin of Sampling Error¹: 2.7 percentage points

Full survey codebook and data are at <https://uasdata.usc.edu/survey/UAS+775>. The tables report weighted row percentages (or medians), observations, and response margin of error.

¹ Factors other than sampling error, including question wording, question order, sample type (e.g. opt-in panels vs. probability panels such as UAS), population coverage, and impact of current events, may affect the results of any survey. In addition, the results of questions asked without an interviewer (e.g. in an internet panel) may differ somewhat from similar questions asked by an interviewer over the phone. The margin of sampling error is calculated at the 95% confidence level, using a sample proportion of 0.5 to generate an upper bound of uncertainty. Please note that this is only an approximate measure of error. Precise measures for each individual question or outcome are included in the tables in the “MOSE” column.

Survey introduction:

This survey asks about your attitudes, habits, and living conditions in Los Angeles. We are interested in how Los Angeles County residents have been impacted by recent local natural disasters and will ask about this near the end of the survey. Thank you for your participation in this important study about where we live, especially during these challenging times.
