In the age of "Big Data," the Department of Economics offers one of the largest and most dynamic undergraduate majors in Dornsife College. Ranked #23 nationally (REPEC), we are an international leader in econometrics, development economics, and experimental economics; and in recent years we have accelerated our growth in macroeconomics and applied economics. Economic theory is intertwined with practical models to address concepts across disciplinary boundaries.

**CAREER OPPORTUNITIES AND RELATED OCCUPATIONS** Political Economy majors learn to use qualitative and quantitative methods to study the origin, development, and operation of political systems. They need to interpret data, forecast trends, identify causes, and recommend solutions. In addition, they must use effective communication strategies to share findings with a variety of audiences. Some careers that value these skills are survey researcher, market research analyst, economic consultant, financial analyst, and policy analyst. Prospective industries include research institutions, political campaigns, government entities, and non-profit organizations. A master's degree is usually required for positions as a political scientist.

**JOB OUTLOOK** According to the U.S. Bureau of Labor Statistics<sup>1</sup>, between now and 2032 employment of economists is projected to grow by 6%, financial analysts is projected to grow by 8%, and market research analysts is projected to grow by 13% — all of which are faster than the average for U.S. occupations. Growth for actuaries is projected to grow by 23%, which is much faster than average.

**RESEARCH OPPORTUNITIES** Qualified undergraduates may enroll in supervised individual research courses. Additionally, faculty may hire undergraduates as research assistants to help with data collection and analysis. The Los Angeles Behavioral Economics Laboratory (LABEL) offers research assistantships in Experimental Economics and Neuroeconomics. Economics is also home to the Center for Applied Financial Economics (CAFE), Center for Economic and Social Research (CESR), and the Institute for Economic Policy Research (IEPR).

**STUDENT ORGANIZATIONS** The Undergraduate Economics Association connects students with faculty, alumni, and peers beyond the classroom. Omicron Delta Epsilon (ODE) is the international economics honors society. The national organization sponsors academic competitions and rewards research and service. The local chapter organizes events including panel discussions and networking. The *USC Economics Review* is an academic publication run by an undergraduate editorial board and offers students analysis on scholarly topics including economic policy and everyday phenomena.
