

*Handbook
for
Graduate
Students*

*Department of Psychology
University of Southern California
2019*

8/25/19 update

This handbook sets forth policies and standards of the Department of Psychology and the Graduate School of the University of Southern California. Graduate students are expected to be familiar with the material presented here, as well as the regulations of the Graduate School presented in more detail in the **USC Catalogue 2019-2020** and in the *Graduate Student Handbook* published by the Graduate School. **Please note that not all policies and standards of the Graduate School are covered in this handbook.** Thus, students must also be familiar with the regulations in the *USC Catalogue*. Appropriate course selection and the general understanding of deadlines, filing of Graduate School forms, etc., are the student's responsibility.

Department of Psychology

APPENDIX II. University Policy on Code of Ethics	33
APPENDIX III. Psychology Department Joint Appointment Faculty List	34

REQUIREMENTS AND DEADLINES FOR THE PH.D. DEGREE IN PSYCHOLOGY

A. Introduction

1. Ph.D. degree requirements can be found in the USC Catalogue for your year of admission.
2. Any potential conflict in requirements between the Graduate School guidelines and this handbook should be brought to the attention of departmental staff.
3. This handbook specifies requirements for the class that enters this academic year. Any students admitted after that date may be subject to different requirements as will be specified in updates of the handbook.
4. At the end of each academic year, areas will provide a brief narrative and a quantitative rating (1 = Satisfactory; 2 = Some Concern; and 3 = Serious Concern) of each student's progress in the program.

B. Residence and Time Limits

1. The equivalent of three years graduate status at USC or elsewhere is minimally required in all Ph.D. programs by the Graduate School. Students in Clinical Science (Child & Family, General Adult, and Clinical-Aging) must minimally spend three years full time on campus plus one full year of internship at a departmentally approved facility.
2. At least 24 units (exclusive of 794, dissertation) are required at the University of Southern California. Whether a transfer student is required to take more than 24 units at this university depends on the evaluation made by his/her guidance committee regarding the relation of previous work to department courses.
3. All degree candidates in Psychology are expected to be full-time students. The registrar considers that six semester units constitute a minimum load for a full-time graduate student, 12 units a normal load, and 16 units a maximum load.
 - a. All first-year students are still required to take at least eight semester units during each of the first three semesters because of the screening procedure described in Sections D and E. It is expected that the other half of the student's time will be spent on research.
 - b. If at any time individual circumstances lead a student to consider carrying a reduced academic load, he/she is responsible for clearing in advance the deviation from regular procedure with his/her advisor or guidance committee.

4. A leave of absence may be taken under exceptional circumstances by requesting it by petition the semester before the leave is to be taken. The petition should be addressed to the head of the student's specialty area and should describe the basis for the request and, if possible, the expected time of return. It should have the endorsement (signature) of the student's advisor or chair of his/her guidance committee. Approval or rejection of requests is determined by the faculty of the specialty area. If approved, the head of the area adds his/her signature to the request. It is to be noted specifically that approval of such a request does not free the student from the Graduate School regulations concerning time limits for completion of the degree.

The student must submit the request to the Department Chair or Director of Graduate Studies. Approval by this official indicates that the leave is formally granted and will be recorded on the student's transcript.

A student who does not return to enrolled status at the end of an approved period of leave is no longer considered to be pursuing an advanced degree. Further, students who fail to apply for a leave of absence or for whom a leave has been denied, but who fail to remain continuously enrolled as defined by the Graduate School, will also be considered to be no longer pursuing an advanced degree. To be readmitted to graduate studies, students must officially apply for readmission as specified in the Graduate School regulations.

Request for a leave of absence is not required of Clinical Science (Child Family, General Adult or Clinical-Aging) students who, with the approval of their guidance committee, leave the campus to complete their internship requirement. They are considered as being active in the program. However, all such students must be officially enrolled.

5. The Graduate School requires that a student complete the degree within eight years of the date from the start of graduate work at the University of Southern California. In the case of students who have earned an applicable Master's degree within five years prior to admission to the doctoral program, the Graduate School requires that the Ph.D. degree be completed within six years. The Psychology Department expects the Ph.D. degree to be completed within five years for non-clinical students. Clinical students are expected to complete their degree within six years, including the year of internship.
- a. Extensions beyond the eight years require submission of a petition to the department and are granted only for very compelling reasons. (This is one reason why students are asked to clear reduced academic loads with their guidance committees and to request department approval of a leave of absence.)
 - b. In the very rare case that permission is granted to extend beyond eight years, under no circumstances will the time for completion be extended beyond 10 years from the date of the beginning of graduate work.

C. Course Requirements

1. The equivalent of 60 semester units (including 794) is the minimum university requirement for the Ph.D. degree. Additional courses may be required, depending on a student's background and goals.
2. All students must take a minimum of 36 substantive units, at least 24 of which must be in the Department of Psychology. Research, thesis or dissertation courses (590, 594, 790, 794) do not qualify as substantive units. A minimum of 8 units (two courses) must be taken in Category A (see below). Courses outside of Psychology cannot be substituted to fulfill these required courses.
3. The other 16 units (four courses) taken in the Department of Psychology must meet a distribution requirement. The courses must be taken from Categories B and C, with at least one course from Category B and one course from Category C. Courses outside of Psychology cannot be substituted to fulfill these requirements. The courses in these categories are listed below.

COURSES THAT FULFILL DEPARTMENT-WIDE CORE REQUIREMENTS

Category A. *Statistics and Research Design*

Courses that belong to this category include:

500 An Overview of Quantitative Methods in Psychology
 501 Classic and Modern Statistical Methods I
 502 Classic and Modern Statistical Methods II
 503 Regression and the General Linear Model
 504 Research Design
 520 Fundamentals of Psychological Measurement
 524 Research Design in Developmental Psychology
 575 Multivariate Analysis of Behavioral Data
 577 Analysis of Covariance Structures
 578 Workshop in Quantitative Methods
 616 Research Techniques for Non-Experimental Social Science
 621 Seminar in Quantitative Psychology
 622 Decision Analysis and Behavioral Decision Theory
 625 Advanced Big Data Methods

Category B. *Biological Bases of Behavior* (physiological psychology, comparative psychology, neuropsychology, sensation and perception, psycho-pharmacology, behavior genetics) and *Cognitive-Affective Bases of Behavior* (learning, thinking, motivation, problem-solving). Courses that belong to this category include:

506 Learning and Cognition
 510 Visual Cognition
 540 Cognitive Neuroscience

544 Psychophysiology
 545 Neuropsychology
 547 Functional Neuroanatomy
 551 Decision Neuroscience
 555 Introduction to Functional Magnetic Resonance Imaging
 576 Psycholinguistics
 586 Advanced Psycholinguistics
 676 Seminar in Psycholinguistics

Category C. *Social Bases of Behavior* (social psychology, group processes, organizational and systems theory) and *Individual Differences* (personality theory, human development, abnormal psychology). Courses that belong to this category include:

512 Seminar in Social Psychology
 514 Psychopathology
 *515 Clinical Assessment
 533 Cognitive Development in Children
 538 Origins of Human Nature
 534 Social and Emotional Development in Children
 *595 Practicum in Clinical Psychology
 612 Seminar in Advanced Social Psychology
 *619 Psychological Intervention
 626 Computational Social Sciences
 660 Seminar in Clinical Psychology
 680 Seminar in Psychopathology
 *695 Advanced Practicum in Clinical Psychology

*Courses marked with an asterisk may only be taken by students in the Clinical, Clinical-Aging, Child & Family Clinical programs.

4. Students in the quantitative psychology specialty area may substitute one additional statistics/research design course for one of the four courses required from Categories B and C, provided they have at least one course from Category B and one course from Category C.
5. In addition to these department-wide core requirements, each specialty area/program within the department has other requirements. These area/program requirements are described in the appendix to this handbook.
6. Students from specialty areas other than Clinical, Clinical-Aging, and Child & Family Clinical may take no more than three clinical courses. Those taken must be from 514 and 660 unless approval is received from the clinical faculty to enroll in a course not on this list.

7. Students who enter the Ph.D. program having taken appropriate graduate courses elsewhere may petition the Chair of the Psychology Department for a waiver of one or more core-course requirements.
8. Students may petition to the Director of Graduate Studies to have 599s fulfill categories A, B and C. Note, however, that 8 is the maximum number of 599 units that can be applied toward the student's degree.
9. Students from any area (except Quantitative) who wish to focus on quantitative methodology may earn a minor in quantitative methods by successful completion of any five courses on the A course list. Students may substitute one of the five courses with another (3 or 4 unit) quantitative course outside Psychology with permission of the students' advisor, Quantitative Area Head, and the Director of Graduate Studies.

D. First-Year Screening Procedure

1. The Graduate School requires that a screening procedure be used with each student before more than 24 units has been taken at the university. (Students must submit petitions to request exceptions.)
2. The Department of Psychology meets this requirement in the following way. Students are screened at the end of their first year. The evaluation is based on performance in courses and on research performance.
 - a. The course evaluation is based on performance in the courses taken during the first two semesters at USC. During that time, students must have taken a minimum of 16 units (four courses), with at least three of those courses being substantive courses from the core lists given earlier.
 - b. Each specialty area evaluates the research performance of its students at the end of the first year. The head of the specialty area must notify the students no later than August 15 of the summer following completion of the first academic year about whether they have met the first-year research requirement. The area/program research requirements are included with other area/program requirements in the appendix to this handbook.
 - c. The outcome of the first-year screening process falls into one of three categories: (1) clear pass (approved to continue), (2) approved to continue for a terminal M.A. degree (but not for the Ph.D.), or (3) dismissal from the graduate program.
 - d. To obtain a clear pass in the first-year screening, a student must have made good progress in research (as judged by the faculty of the specialty area) and obtained a B (3.00) average and no more than one C in the courses taken during the first year. Cumulative GPA for the year is based on all courses taken. When a student does not meet the standards for a clear pass, the student will have failed the first year

- screening. The faculty of the student's specialty area then will make a recommendation to the faculty about whether the student should be approved to continue for a terminal M.A. degree or be dismissed from the graduate program. This recommendation must be communicated in writing to the student and to the Chair of the department no later than August 15 of the summer following completion of the first academic year. All such cases will ultimately be decided by ballot of the Psychology faculty no later than the first faculty meeting in September. A majority of the members present at the meeting is required to decide the issue.
3. In very rare cases, the faculty may decide that extenuating circumstances obviate what would otherwise be a fail. All such cases will ultimately be decided by ballot of the Psychology faculty, with a majority of the members present required to carry the exception. With such a vote a student may be permitted to continue beyond the first year with a grade-point average below B (3.00). It should be noted, however, that the Graduate School requires that a minimum grade-point average for all graduate work attempted at the university must be 3.00 before a degree can be granted. Thus, a grade-point average that falls below a 3.00 during a given semester will be considered a strong indicator that the student is not in a position to succeed in the program. Nevertheless, in very rare extenuating circumstances, permission to register following any semester in which the GPA has dropped below this level will require petition from the student's research advisor. The Director of Graduate Studies will meet with the research advisor, the student, and the Department Chair to determine if the petition should be forwarded to the Graduate School for consideration. Students who transfer credits must achieve this minimum both on all graduate residence units and on all combined residence units and units taken elsewhere for graduate credit.

E. Second Year Research Requirement

1. The Department of Psychology has an additional screening procedure involving judgment of the student's research competence. During the first two years of graduate study at USC, each student works with a faculty member on a program of research that culminates in a written report. This report must be a Master's thesis or a research report of comparable scope and quality. The student's performance in planning, conducting, and reporting the study provides the basis of a second-year screening.
 - a. The second year project must be *approved* by the evaluation committee by the end (date classes end) of the fourth semester in residence.
 - b. The following evaluations are used:
 - (1) Satisfactory for M.A. level and approved to proceed toward the Ph.D. Generally for this rating, the research report must meet the standard of "acceptable for publication" with reference to:
 - (a) conception and implementation of project
 - (b) quality of report
 - (2) Satisfactory for M.A. level, but not approved to continue for Ph.D.

- (3) Unsatisfactory for M.A. level
- c. Responsibility for this screening lies with members of the student's screening committee, most often composed of faculty from within the student's specialty area. [This is generally the area into which the student was accepted for graduate training.] The committee consists of three tenure-track members of the department who review the paper.
 - d. To pass the second year screening, that is, to be permitted to proceed toward the Ph.D., the three committee members must approve the work. The department form for reporting the outcome of this screening procedure and a final, committee- approved copy of the research report must be provided to the research advisor, i.e., the chair of the screening committee, and to the Graduate Student Advisor prior to the last day of classes of the student's fourth semester.
 - e. Course credit (590) may be obtained for this research, at the student's and advisor's option. For those who do not already have an M.A. degree, the department urges registering for 594ab (rather than 590) and submitting the report as a Master's thesis.
 - f. Such a research project done at USC is required of all students, regardless of prior graduate work at another institution.
 - g. A file of the completed sign-off sheets and the approved research papers presented in fulfilling this requirement is kept by the department. A photocopy of the approved research paper is acceptable for this purpose.
 - h. Faculty evaluation of the student's second-year research project will be reported at the faculty meeting held during September of the student's third year.
 - i. In the fall of their third year, students are required to present their second-year projects or another research project as part of a departmental poster session typically held after the first faculty meeting in the fall.
2. 24-Unit Screening.

A student's success in passing the 24-unit screening (see D.2.) commits the department to supervising her/him to completion of the second-year research project or M.A. thesis (provided she/he can complete all requirements, including the writing of an acceptable report within the time limits of the department and the Graduate School).

F. Assisting in Teaching and Research

1. In addition to formal course work, the Department of Psychology considers that experiences as a research assistant and teaching assistant can be valuable parts of graduate students' training and should be strongly encouraged for all students.
2. As a teaching assistant, students participate in various teaching functions of the department, such as preparing examinations, scoring them, assisting in registration, and actual instruction (within the limits set by the University in connection with the responsibility of instructors for their classes).

3. As a research assistant, students can gain invaluable experience in carrying out research projects, from conceptualization and research design, to implementation, analysis and write-up.

G. Probation and Termination

1. To be in good standing in the Ph.D. program in Psychology, a student at any level of training must maintain a 3.0 average in course work and carry no more than one IN (incomplete) on his/her record. Also, in progressing through the program, a student must meet a number of deadlines (in connection with 24-unit screening, research screening, the qualifying examinations, and completion of the dissertation). In addition, a student must act in a manner which does not violate the ethical and professional standards of the American Psychological Association.
2. A student on probation is defined as one who is in any of the following categories:
 - a. whose GPA falls below 3.0 at any time;
 - b. who has more than one IN on her/his record at any time;
 - c. who is placed on probation as a result of the 24-unit screening process;
 - d. who has one grade of C or worse in a course in his/her specialty area;
 - e. whose second year research report has not been submitted and judged acceptable by the end (date classes end) of the fourth semester in residence;
 - f. who has not successfully completed the Ph.D. qualifying examination by the end (date classes end) of the seventh semester in residence (some areas have earlier deadlines; check specific area requirements);
 - g. who has not completed the Ph.D. dissertation within the time specified by the Graduate School (8 years).
3. Probation formally begins with written notification of the student by the specialty area faculty or department administrator. Notification shall include a statement of the reason for probation, probationary conditions, and duration of probation.
4. A student may return from probation to good standing in the following ways, with each remedy corresponding to the list in G.2, above.
 - a. the student must bring the GPA up to 3.0 within one semester;
 - b. replace the IN with at least a B (not a B-) or better within one semester;
 - c. meet the requirements of probation as specified by the specialty area faculty;
 - d. repeat the course, earning at least a B (not a B-) or better, within one year;
 - e. turn in second year project and have it approved by the time of the final faculty meeting in the fall.
 - f. take and pass the qualifying examination by the end (date classes end) of the eighth semester in residence;
 - g. complete the dissertation within one semester;

5. Relation of probation to funding. Being on probation may put your funding at risk.
6. Termination of graduate student status. A student will be dropped from the program for any of the following reasons:
 - a. failure to return from probation to good standing as described earlier in G.4;
 - b. earning two grades of C or worse in courses in specialty area;
 - c. acting in a manner which, in the opinion of the faculty (2/3 vote) violates the ethical and professional standards of the APA and for which a warning or probationary period is either inappropriate or impossible;
 - d. failure to return from leave of absence by the date specified.
7. Petition for readmission. A student who has been dropped from the program may petition for readmission if the petition is endorsed by a specialty-area faculty member who is willing to take responsibility for chairing the student's guidance committee.

The petition will be reviewed by and voted upon by the full-time faculty of the specialty area. [Unanimous approval (with no abstentions) is needed for readmission.]

H. Funding

1. The department tries to support as many students as possible and to match students with placements on the basis of training needs. Students should not expect to be supported simply as a matter of course. For example, Graduate School fellowships require that the student maintain full-time status and good standing in the program.
2. Students in good standing will be given priority over students on probation in providing financial support. Each specialty area faculty decides the standing of the student in making decisions. Among other such factors are how many years the student has been in the program, whether a student has the qualifications for serving as a teaching assistant in a particular course, and how well the student has carried out previous assignments.
3. Unless service is needed by the department, the general principle is that support is not provided beyond the fifth year.
4. Students are typically admitted on two years of fellowship. The “Early Year” Fellowship is designed to free students up to complete their early graduate research projects, particularly the second year project. Although it is typically used during the first or second year at USC, it can be taken any time during Years 1-3 in the program.
5. The “Advanced Research” Fellowship is designed to free up students to fully engage in *dissertation-related activities*. For this reason, students may only take the Advanced Research Fellowship during Year 4 of the program or beyond, but only when they (1) have completed the Qualifying Exam, and (2) are engaged in full-time research. Thus, if

students are completing non-research externships or internships that exceed 10 hours per week, they will not be allowed to use their Advanced Research Fellowship during that semester. However, students who receive external fellowship support for dissertation research may petition the DGS or Chair to use the Advanced Research Fellowship in a more flexible fashion.

I. Course Registration for Qualifying Exam

Once students have sufficient units for graduation, they are encouraged to enroll in GRSC 800 while preparing for their quals. One unit constitutes full time enrollment. GRSC 800 may be taken for 3 semesters if necessary. Students should not repeatedly enroll in 8 units of 790.

J. Guidance Committee

1. After completing the second year project, students and their advisors should discuss future research directions for the student. Together they should be thinking about the input the student will need from other faculty to guide them in these research directions. This should lead to the formation of the student's guidance committee which will help the student in formulating their qualifying examination and dissertation proposal. Forming the guidance committee requires obtaining a form (see the Graduate School website: <http://graduateschool.usc.edu/>), obtaining signatures from all those who agree to be on the committee, and turning in the signed form to the Graduate Advisor. The Graduate Advisor then submits the signed form to the Graduate School for approval. The guidance committee should be approved about a year before the student takes the qualifying examination, but *no later than six months before the qualifying exam*.
2. The committee must have at least four faculty members from within the department and one member from outside the department.
 - a. At least two members of the committee must be from the specialty area that accepted the student into the graduate program. This usually includes the chair of the student's guidance committee.
 - b. There must be at least one Psychology Department representative from an area other than the student's specialty area.
 - c. The fourth member can be filled by faculty members with the following affiliations: faculty from the student's area, faculty from another area in psychology, faculty members with a joint appointment in psychology (see the Department's website), faculty from other USC departments, or faculty from other universities. These members can also be persons with non-tenure track (NTT) faculty appointments, approved by the chair of the committee, who make sense for the student's study. If the fourth member is NTT or from outside the Psychology Department, the student's advisor must give approval.
 - d. The fifth member of the committee is considered the "outside" member. This individual must be a tenure-track full-time member of the faculty of USC, hold the

- rank of Assistant Professor or above, and be from a Ph.D. granting department other than psychology. This member can have a joint appointment in Psychology so long as they are classified as “external” on the joint appointment list (see Appendix III). Check with the Graduate Advisor.
- e. At least three committee members must be tenure-track faculty with a primary appointment in the Psychology Department (see the core faculty list on the departmental website).
 - f. NTT faculty of exceptional standing may serve as chairs of guidance committees in the Psychology Department, upon the written request of the department chair and approval of the school dean. To serve as chair, the NTT member must have a primary appointment in the Psychology Department and must have a documented record of exceptional expertise and superior achievement in a field relevant to the student’s project.
3. The Qualifying Exam has separate written and oral sections. These are completed sequentially. The written portion must be passed first and then the orals can be scheduled. See K. below for the content of each portion of the exam.
 4. Two forms must be submitted concerning qualifying exams.
 - a. 6 months prior to submitting the written portion of their Qualifying Exam, students must submit their Appointment of Committee (AoC) form to the Dornsife Dean’s Office for approval. This form establishes the guidance committee. The AoC form is available at the Graduate School website: <http://graduateschool.usc.edu/> (click on Current Students; Guidelines, Forms and Requests; then [Forms for Qualifying Exams and Dissertation Defenses](#)).
 - b. After passing the written portion of the exam, students have 60 days to schedule their oral exam meeting.
 - c. For changes in the membership of a guidance committee, it is necessary to complete a Change of Committee (CoC) form and turn it in to the Department Chair. This form is available at the Graduate School website (noted in 3.A.).
 5. If the student and guidance committee chair are not able to form a complete committee, or if a former committee member is no longer available to serve, the Chair (with the advice of the Graduate Committee) will appoint members of the faculty to serve on that committee.

K. Qualifying Examination

1. The student and advisor should begin planning for the qualifying examination following the completion of the second year project. To ensure completion of the doctoral degree in five years (six years for clinical students), the qualifying exam must be taken no later than at the *end of the seventh semester*. (Some areas may have earlier deadlines; see specific area requirements.)

2. Prior to taking the qualifying exam, the student must have met all departmental requirements with regard to courses and screening and must have the endorsement of his/her guidance committee to take the exam.
3. The qualifying examination is designed in part to test the student's expertise and readiness to undertake independent research. It also is a learning opportunity for students to gain critical skills and produce scholarly products that contribute to students' records of accomplishment. The examination thus meets a variety of goals in students' training.
4. Specialty areas within the department have considerable latitude in structuring qualifying examinations. The material provided in the Appendix for each specialty area should be consulted to determine what specific protocols for examination have been approved by the given area.
5. The written portion of the Qualifying Exam generally follows one of three models:
 - a. The student submits one or two papers of publishable quality that represent work conducted since the second year project (depending on area and guidance committee requirements).
 - b. The student provides an analysis of literature that is pertinent to the research that is being planned for the dissertation. This may become or be the basis of the introduction to the dissertation.
 - c. The student is provided with questions formulated by his or her guidance committee, each being on a different subject. For each question, the student writes a well-referenced response over a period that might range up to five days.
6. We strongly recommend that students submit the written portion of the Qualifying Exam to committee members *by September 1st of the seventh semester*.
7. The written section of the exam is first submitted to the full Committee and evaluated on the Departmental Evaluation Form by each member. Committee members provide this feedback to students within 2 weeks of receiving the written exam. Only one failing vote is permitted in order for students to pass. The Committee Chair is responsible for summarizing these evaluations and sharing them with the student.
 - a. If students fail the written portion of their exam, they can resubmit it one time to their committee. A second failure removes students from the program.
 - b. When students pass the written section, they may move on to the oral portion of the exam. Students have 60 days to schedule their oral exam meeting once they pass the written portion.
8. The oral exam portion of the Qualifying Examination is focused on the dissertation proposal. After passing the written portion of the exam, students will submit a draft of

their dissertation proposal to their committee and will meet individually with committee members in order to develop the final version of it. At the advisor's option, the dissertation proposal may be written up in the format of an NIH or NSF grant application.

- a. The final version needs to be given to committee members 2 weeks prior to the scheduled orals. If students fail to do this, committee members can cancel the scheduled orals.
 - b. The oral exam is usually scheduled for 2 hours.
 - c. At the orals, students will present their proposed dissertation project. Committee members will evaluate the oral defense on the Departmental Evaluation Form. They will vote to pass or fail the orals, and no more than one dissenting vote enables a pass. The Committee Chair is responsible for summarizing these evaluations and presenting them to the students on the summary form.
 - d. Attendance of all guidance committee members is required at this meeting.
 - e. Students are *not* permitted to serve food to committee members during the oral exam portion of the Qualifying Exam.
9. A pass for the written or oral portion of the exam cannot be made contingent upon other factors, such as the completion of additional course work or supplemental literature review. However, it is possible for the student to pass the orals with changes yet to be made to the dissertation proposal.
 10. If the vote of the guidance committee is a pass, it also should decide on whether to retain the current composition of the committee as discussed in L1.
 11. In the event that the oral examination is failed, the guidance committee may recommend to the Graduate School that the student be permitted to take the orals again. Requests for exceptions to this time period must be approved by the department Chair. A student may not be permitted to take the oral portion of the qualifying examination more than twice.
 12. The Graduate School form for reporting results of the exam should be returned by the student to the graduate advisor immediately after the defense with all required signature from the committee.
 13. The retaking of a failed qualifying examination or any portion of a qualifying examination must take place *between one and six months from the date of the first examination*.

L. Admission to Candidacy

1. Admission to candidacy for a doctoral degree occurs only after a student has (a) passed departmental course and screening requirements, (b) completed at least 24 units at the University, and (c) passed the qualifying examination.

2. Admission to candidacy is by action of the Director of the Graduate School.
3. Notice of admission to candidacy is sent to the student by the Department of Psychology Chair.

M. Dissertation Committee

1. After the qualifying examination has been passed, the student must appoint a dissertation committee. At this point, the committee may be reduced to four members, with a AoC/CoC form. The minimum composition of the final committee is: two members from Psychology from the student's area, one from Psychology from outside the student's area, and one member from an outside department. For example, a Social student would need at least two committee members from our Social area, at least one committee member from one of our other areas (i.e., BCS, Clinical, Developmental, or Quantitative), and at least one committee member from outside the department. At least three members must be tenure-track faculty with a primary appointment in Psychology.
2. The committee member from outside the department must be a tenure-track full-time member of the faculty of USC, hold the rank of Assistant Professor or above, and be from a Ph.D. granting department other than psychology. This member can have a joint appointment in Psychology so long as they are classified as “external” on the joint appointment list (see Appendix III).
3. NTT faculty of exceptional standing may also serve as chairs of dissertation committees in the Psychology Department, upon the written request of the department chair and approval of the school dean. To serve as chair, the NTT member must have a primary appointment in the Psychology Department and must have a documented record of exceptional expertise and superior achievement in a field relevant to the student’s project.
4. The composition of this committee is reported on the AoC/CoC form.
4. At this time the student should see the graduate advisor to run a degree check and a STARS Report.

N. Dissertation Registration

1. A student must register for dissertation (794) the semester after passing the qualifying examination and must be registered for dissertation every semester (excluding summer sessions) until degree requirements are completed.
2. Four units of registration in 794 (that is, 794a and 794b) comprise the minimum requirement. Under most circumstances these two registrations cover a time period of two semesters. For both registrations to occur in the same semester approval by the Graduate School is required.

3. Not more than eight units of credit for 794 may be received.
4. Clinical students may register for 691 (1 non-credit unit per semester) rather than 794 while on internship. Note: students must be registered for 691 or 794 during the semester when they actually take their final oral, unless they defend during the summer.

O. Dissertation and Defense of Dissertation

1. At the time students schedule their dissertation defense meeting they must inform the Graduate Student Advisor. The student must go to the Graduate School Thesis Center site and set up their dissertation profile which will give committee members access to their online Approval to Submit. At least two weeks before the scheduled defense, the Graduate Student Advisor will post and distribute to all faculty and graduate students a notice of the meeting.
2. The candidate must submit a dissertation acceptable to her/his dissertation committee and to the Director of the Graduate School. The dissertation committee must approve the form of the dissertation as well as its content.
3. Generally the committee will require one of the following dissertation models:
 - a. The dissertation is prepared as a comprehensive treatise on the matter under investigation. It should include extended discussion of all background literature that seems pertinent to the research as well as the methods, results and discussion of the findings.
 - b. The dissertation is written in a form that would be suitable for a major publication. Pertinent background is cited and discussed as would be the case for a substantial journal article.
4. An oral defense of the dissertation is required of the candidate. It is conducted by the dissertation committee, and according to the Graduate School Handbook is open to the general university community, though only members of the dissertation committee have the authority to recommend acceptance. It is expected that the dissertation committee will meet privately to make this determination.
5. Students are *not* permitted to serve food to committee members during the oral dissertation defense.
6. Both the dissertation and the oral defense must have unanimous approval by the dissertation committee for satisfactory completion of the dissertation requirement. If the defense is satisfactory, the committee then signs the “Approval to Submit Defended and Final Copy of Dissertation” form. If additional work is required, the form must be signed

only on full completion. Each committee member will have access to the electronic Approval to Submit set up by the student.

7. The Submission website provides a schedule of specific dates for completing the various requirements to qualify the student for the Ph.D. degree at Commencement in May or to receive the degree in August or December. For more information, go to the Graduate School website: <http://graduateschool.usc.edu/> (click on Current Students, Thesis & Dissertation...).
8. The dissertation must be written in APA style. In other words, dissertations must be prepared according to the manuscript submission guidelines specified in the current version of the *Publication Manual of the American Psychological Association*.

APPENDIX I

Specialty Area Requirements

REQUIREMENTS OF BRAIN & COGNITIVE SCIENCES PROGRAM

The Brain and Cognitive Sciences area of the Psychology Department is composed of five interest subareas: cognitive science, cognitive neuroscience, behavioral neuroscience, clinical neuroscience and behavioral genetics. In addition to the Psychology Department requirements, all students in the Brain and Cognitive Sciences area are required to take Statistical Methods (Psychology 500 or 501) and either 502 or 503. Those who have a strong background in statistics (i.e., equivalent to 500/501 and 502/503) may seek permission from their advisor to take PSYC 621 (Seminar in Quantitative Psychology) instead. The Brain and Cognitive Sciences area also recommends students take Functional Neuroanatomy or Neuropsychology (PSYC 547 or 545), and/or Cognitive Neuroscience (PSYC 540).

Beyond this there are no formal course requirements; course loads are worked out individually for each student in consultation with his or her faculty advisor.

It cannot be emphasized too strongly that the most important aspect of training is research. Generally, a student is admitted with the sponsorship of an advisor, i.e., faculty member, whose research most closely matches the expressed interests of the student. This pairing is subject to mutual satisfaction, and may be altered by the student or the advisor. However, it is not possible for a student to advance without sponsorship by a faculty member in the Brain and Cognitive Sciences area.

Consistent with this emphasis on research, students will be evaluated regarding their research performance at the end of the first year. For this evaluation, students must produce a written report of their first year research activities. The collaborative research relation between student and advisor is designed to facilitate the fulfillment of this requirement. This report is reviewed by the advisor and at least two other faculty members in the BCS area. A faculty member from another departmental area can be added as a reviewer as needed or desirable. This report is due July 15th and must be acceptable in order for the student to continue in the program. The area head will convey the outcome of this review to the department by August 15.

For evaluation of research progress in subsequent years, see the guidelines of the department concerning the second-year research requirement, preliminary examination, qualifying examination, and dissertation defense.

REQUIREMENTS OF THE CLINICAL SCIENCE PROGRAM

COURSE REQUIREMENTS

I. AREA A. Statistics and Research Design

Three courses in research methodology and techniques of statistical analysis are required, which should include PSYC 504 (Research Design) and an introductory level statistics course (PSYC 501 (Statistics in Psychological Research) or PM511a (Data Analysis). At least two statistics courses are to be taken in the Psychology Department.

II. AREA B. Biological and Cognitive-Affective Bases of Behavior

Breadth requirements in the following content areas are required and can be met through the courses listed¹:

- ***Biological and affective aspects of behavior***, to be met through PSYC 544 (Psychophysiology), or PSYC 540 (Cognitive Neuroscience) or PSYC 547 (Functional Neuroanatomy and Behavior which students must take in combination with PSYC 660 (Clinical Neuropsychology).
 - ***Students are also required to take AREA C courses PSYC 612 (Social Psychology) and PSYC 514 (Psychopathology) to add further breadth to their affective aspects of behavior.***
- ***Cognitive aspects of behavior***, to be met through PSYC 506 (Learning and Cognition) or PSYC 533 Cognitive Development in Children or PSYC 612 (Current Issues in Social Cognition)
- Clinical students can also use AREA B courses to meet our Integrative Knowledge requirement by taking Cognitive Development in Children (PSYC533) or Cognitive Neuroscience (PSYC 540) or the AREA C course Current Issues in Social Cognition (PSYC 612)

III. AREA C. Social Bases of Behavior and Individual Differences

- One of the following courses is required for breadth in social aspects of behavior PSYC 612 (Self-Concept and Motivation OR Current Issues in Social Cognition).
- Clinical students may also enroll in PSYC 512 (Seminar in Social Psychology), however it only fulfills the requirement for social bases of behavior. It does not fulfill the requirement for affective or cognitive basis of behavior.

IV. Clinical Sequence Courses

Eight clinical psychology core courses also fall into Area C by the Department's classification:

- PSYC 514 (Psychopathology)
- PSYC 515 (Psychological Assessment)
- PSYC 595a,b,c (Practicum in Clinical Psychology, which must be taken for 3 semesters)
- PSYC 619 (Psychological Intervention)
- PSYC 695 (Advanced Practicum in Clinical Psychology, which must be taken for four

semesters)

- PSYC 660 (Clinical Seminars ; two seminars are required)

Students are to take two clinical seminars (660, Seminar in Clinical Psychology). For students in the child-family, clinical geropsychology or clinical neuropsychology major areas of study, a course in the major area of study can substitute for one of the two clinical seminars.

Students are also required to obtain background in the historical foundations of psychology.

- *History and systems of psychology*, to be met through PSYC 508 (Historical Foundations of Psychology)

V. OTHER REQUIRED ENROLLMENT

During 1st semester as a TA: Enroll in MDA 593 Practicum in Teaching in the Liberal Arts

After defending Qualifying Exam (review paper plus dissertation proposal):

Enroll in 794 (Doctoral Dissertation) every semester until the dissertation is defended (when on internship, enroll in 691 instead)

During summer sessions: Enroll in 595 or 695 each summer (as assigned and discussed with the PSC Clinic Director)

Brown bags: Clinical area brown bags (1.5 h presentations, held 1-4 times per month) are REQUIRED and a central part of the curriculum

Workshops: Day-long workshops are typically held 1 time per semester; student attendance is REQUIRED as this is a central part of the curriculum

VI. OPTIONAL ENROLLMENT/COURSES

2nd Year Project/Master's Thesis credits: During the second semester of Year 2, it is optional to enroll in PSYC 590 (if completing 2nd year project) OR PSYC 594ab (if submitting as a master's thesis to the graduate school)

While preparing for Qualifying Exam: It is optional to enroll in 1 unit of GRSC 800 (enrolling counts as full enrollment)

VII. MAJOR AREA OF STUDY COURSE REQUIREMENTS

Child-Family

One of the di-pracs (PSYC 695) selected **must** be child-family

3 additional courses from any of the following options:

660s related to child-family topics (e.g., Child Interventions). One PSYC 660 on child-family topics can be counted as both fulfilling Child-Family Major Area of Study AND Clinical

program requirements.

Courses in Developmental Psychology (including PSYC 533, PSYC 534, PSYC 574, or special topic seminar)

Other in department or external to department courses on child-family related topics relevant to: diagnostic and assessment issues, intervention, policy, child development, child psychopathology and treatment, learning disabilities, family systems (external courses offered in Social Work, Education, Sociology, Law – obtain approval before enrolling)

Clinical Geropsychology

One of the di-pracs (PSYC 695) selected **must** be older adult

One of the required PSYC 660 seminars **must** be related to older adults (e.g., Clinical Neuropsychology or Health Psychology). One PSYC 660 could be fulfilled by taking a course within another department that is clinically-oriented and related to older adults (e.g., GERO 522 Counseling Older Adults and Their Families).

3 additional courses as follows:

A course providing an overview/broad introduction to adult development and aging in Psychology or Gerontology is REQUIRED (e.g., GERO 520 Life Span Developmental Psychology)

A course covering longitudinal research design and data analysis is REQUIRED (e.g., PSYC 524 Developmental Research Design)

A course covering some other aspect of aging (e.g., biology of aging, neuroanatomy, neuroscience of aging, epidemiology, social policy) in PSYC, GERO, or another department (obtain advisor approval; course should be consistent with student's interest within geropsychology)

Neuropsychology

Coursework

Functional Neuroanatomy (PSYC 547; Dr. Bechara) - REQUIRED

Seminar in Clinical Psychology – Clinical Neuropsychology (PSYC 660; Dr. McCleary) - REQUIRED

Neuropsychology (PSYC 545; Dr. Bechara) - REQUIRED

Advanced Overview of the Neurosciences (NSCI 524) – pending approval of the course instructor - OPTIONAL

Advanced Overview of the Neurosciences (NSCI 524) – pending approval of the course instructor - OPTIONAL

Introduction to Functional Magnetic Resonance Imaging (PSYC 555) - OPTIONAL

Clinical Placements in Clinical Neuropsychology (2 REQUIRED)

ADRC RA-ship (Supervisor, Dr. McCleary)

USC Family Medicine - Neuropsychology Unit (Supervisor, Dr. Han)

USC Neurology Department (Supervisor, Dr. McCleary)

UCLA Department of Psychiatry and Behavioral Sciences (Supervisor, Dr. Bilder)

Additional didactics and experiences (2 REQUIRED)

Neurology grand rounds – Dr. Chui

Neuropathology didactic seminar -- Brain cutting – Dr. Miller

Research seminars and conferences broadly relevant to neuropsychology – Dr. Nation

Neuropsychology Journal Club – Dr. Nation

Research (REQUIRED)

Demonstrated research experience broadly relevant to neuropsychology (Nation can provide guidance)

VIII. Other Research and Clinical Requirements

For further details about research milestones, competencies and requirements, and for clinical requirements, please read the Clinical Science Handbook. A summary and sign-off sheet itemizing all requirements is attached. This sheet should be examined at least once per year by the student and her/his advisor.

CLINICAL AREA REQUIREMENTS ENTERING CLASS 2018-2019

STUDENT NAME: _____

RESEARCH MILESTONES	DATE COMPLETED	TARGET DATES
Submit and defend 1 st year proposal with 3-person committee		<i>Required:</i> Year 1, 2 nd semester, last day of classes
Submit and defend final 2 nd year/master's project with 3-person committee		<i>Required:</i> Year 2, 2 nd semester, last day of classes
Present at departmental poster display		<i>Required:</i> Year 3, 1 st semester
Establish guidance committee and submit form		<i>Recommended:</i> Year 3, 2 nd semester; <i>Required:</i> No later than 6 months before the "written" portion of qualifying exam is submitted
Submit 1-2 page prospectus on both parts of the qualifying exam to committee chair		<i>Recommended:</i> Year 3, 2 nd semester, last day of classes
Complete and submit qualifying exam paper		<i>Recommended:</i> Year 4, September 1, 2020. <i>Required:</i> Year 4, 1 st semester, last day of classes.
Submit and defend dissertation proposal		<i>Required:</i> Year 4, 1 st semester, last day of classes.
Submit and defend dissertation		Year 5 or Year 6
Internship		Year 6 (recommended) or Year 7 (w/approval)

Papers need to be submitted to the committee two weeks before a scheduled meeting

CLINICAL PRODUCTS	DATE COMPLETED	TARGET DATES
Assessment report (done in PSYC 595b)		Year 1, 2 nd semester
Intervention case report (done in 1 st PSYC 695)		Year 2, 2 nd semester
Theory of change paper (done in 1 st PSYC 695)		Year 2, 2 nd semester
Intervention case report (done in 2 nd PSYC 695)		Year 3, 2 nd semester

COURSE OR COURSE OPTIONS	WHAT WAS TAKEN AND/OR WHEN
595a Clinical Interviewing & Professional Issues	
515 Clinical Assessment	
514 Psychopathology	
619 Psychological Intervention	
595b Assessment Practicum (2 semesters)	Semester 1: _____ Semester 2: _____
695 Advanced Didactic-Practicum (academic year official course; Adult, Child-Family; Older Adult)	Course 1: _____ Course 2: _____ Course 3 (if applicable): _____

660 Clinical Seminar (2 semesters required)	Course 1: _____ Course 2: _____
---	------------------------------------

COURSE OR COURSE OPTION—Cont.	WHAT WAS TAKEN AND/OR WHEN
504 Research Design	
508 Historical Foundations of Psychology	
512 Seminar in Social Psychology OR 612 Seminar in Advanced Social Psychology	
One of the following 3 options: 1) Psychophysiology (544) 2) Cognitive Neuroscience (540) 3) Functional Neuroanatomy and Behavior (547) AND Clinical Neuropsychology (660)	
One of the following 3 options: 1) Learning & Memory (506) 2) Cognitive Development in Children (533) 3) Current Issues in Social Cognition (612)	
One of the following 3 options: 1) Cognitive Development in Children (533) 2) Cognitive Neuroscience (540) 3) Current Issues in Social Cognition (612)	
Two of the following courses: 1) 500 Techniques of Data Analysis 2) 501 OR PM511A Statistics in Psychological Research OR Data Analysis 3) 502 Analysis of Variance and Experimental Design 4) 503 Regression and the Linear Model 5) 524 Research Design in Developmental Psychology 6) 575 Multivariate Analysis of Behavioral Data 7) 621 Seminar in Quantitative Psychology	Course 1: _____ Course 2: _____
794 Doctoral Dissertation (every semester after defending qualifying exam)** **enroll in 691 Internship in Clinical Psychology while on internship instead of 794	
Summer 595 or 695	
Other courses taken (major area of study, electives)	

Signature of Research Advisor: _____

Date:

Signature of DCT: _____

Date:

COMMENTS:

REQUIREMENTS OF DEVELOPMENTAL PSYCHOLOGY PROGRAM

The major requirements of the developmental program are that students take required statistics and developmental courses, that they be continuously enrolled in at least 8 units of graduate work for the first three years of study, and that they be actively involved in research. Courses from which students are expected to choose a program of study in the first two years of graduate study are listed below. There is latitude for substitution of some courses depending on availability and student requirements, but normally every student will take 533 and 534.

Course Requirements

In addition to meeting departmental distribution requirements, students in the developmental psychology specialization are required to take 500, 501 and one additional statistics course selected from 502, 503 and 575. The following specific courses are also required, and should be completed in the first two years:

533, 534, Cognitive Development, and Social Development, are the core courses for the Developmental area. They should be taken in the first two years. Take them in any order. Sometimes one or both of these courses are not completed until the third year of study because the courses were not offered in certain years (e.g., due to faculty leaves).

In addition to the courses outlined above, the area recommends that students take two advanced seminars in the Psychology Department. Other recommended courses are 504, Research Design, and/or 524, Research Design in Developmental Psychology. Classes should be selected in consultation with your advisor.

RESEARCH REQUIREMENTS

There are first year, second year and dissertation research requirements that are very similar to the requirements of the Psychology program as a whole.

REQUIREMENTS OF QUANTITATIVE PSYCHOLOGY PROGRAM

1. Course Requirements:

Students in the Quantitative Methods (QM) area must take and pass a minimum of six (6) QM courses from the A list. Students who do not meet this requirement by the end of 5 years will be dismissed from the QM area. [Note: This assumes only one QM class per semester for 3 years. QM students should be taking at least one of these courses every semester until finishing their Qualifying Exam (see below). It is possible to substitute one quantitative course from another department with the approval of both the student's main advisor and the area head. If the student's faculty advisor also serves as area head, a different QM faculty member will be required.]

2. 2nd year project:

Same as the rest of the Department: A written document must be approved by the evaluation committee by the last day of classes of the student's 4th semester (usually Spring). If not completed by this date, the student will be placed on probation. The student must then have the project approved by the final faculty meeting of the 4th semester. Students who do not meet this requirement will be dismissed from the program.

3. Qualifying Exam (QE) Timing: The Qualifying Exam must be completed by the end of the 7th semester (usually Fall of the 4th year). If the QE is not completed, the student will be placed on probation and must complete by the end of the 8th semester (usually Spring of the 4th year.)

4. Qualifying Exam Format: The format of the QE is intended to be flexible, but the QE must be both written and oral. The format of the QE must be approved by both the guidance committee and the area head in advance of the deadlines above. [Once again, if the student's faculty advisor also serves as area head, a different QM faculty member will be required.] Suggestions for the written QE include any one of the following options: (1) Two quantitative papers authored by the student (multiple authors are acceptable if the student is first author) which are considered suitable for submission for publication (or published), (2) a timed closed book/notes test (usually

several hours), (3) Written responses to questions posed by the committee (usually several days). Other options may also be considered by the guidance committee. The oral exam will be reviewed by five faculty members, but must consist of at least two QM faculty members, and one faculty member outside of QM. Normally the oral exam will focus on a defense of the dissertation proposal, but may also include questions about any portion of the written exam.

5. Student Evaluation and Progress: This will be the same as to the clinical evaluation

REQUIREMENTS OF SOCIAL PSYCHOLOGY PROGRAM

Course Requirements

The 36 substantive units required by the department (see C.2) must conform to the following requirements:

3 courses from AREA A; one of these must be 616 (or an alternative course approved by the social area), which is to be taken during the first or second year of study.

1 course from AREA B.

4 courses from AREA C, which must include 512 taken in the first year, and three 600-level content seminars in social psychology (i.e. 612, which is taught by a different professor with a different topic each semester.)

1 course in an area outside social psychology that is relevant to their research program and chosen with the consent of the advisor.

First Year Research Evaluation

In the spring semester all first year students will select an advisor by January 15. In conjunction with her/his advisor the student will write a project statement and a list of goals for the semester.

By the first day of spring final examinations the student will have prepared a written summary of her/his progress in achieving the proposed goals. The student and the advisor will then evaluate the amount and quality of the work completed during the semester.

APPENDIX II

University Policy on Code of Ethics

For details on USC Code of Ethics policy, please visit the USC website:

<http://policies.usc.edu/>

APPENDIX III

Psychology Department Joint Appointment Faculty List

Psychology Department Joint Appointment Faculty List

The faculty members with joint appointments in Psychology listed below have been categorized either as *internal* or *external* members. The critical distinction is that *external* joint faculty may serve as “outside” members on guidance or dissertation committees, whereas *internal* joint faculty may not. As a general rule, joint faculty may serve on your committee only in the capacity indicated. If you have any questions about whether a joint faculty member is eligible to serve on your committee, and in what capacity, discuss with the Graduate Advisor or Director of Graduate Studies.

Please note that although *external* joint faculty are eligible to serve as outside committee members, this is not a comprehensive list of eligible outside members. Indeed, the overwhelming majority of faculty who serve as outside members on Psychology guidance/dissertation committees do not have joint appointments in our department.

Name	Home Department	Always Internal or always External
Abdou, Cleopatra	Leonard Davis School of Gerontology	External
Arbib, Michael	Viterbi School of Engineering	External
Aziz-Zadeh, Lisa	Occupational Therapy	External
Bottjer, Sarah	Department of Biological Sciences	External
Briere, John	Keck School of Medicine	Internal
Carnevale, Peter	Marshall School of Business	External
