

Sea Level Rise & Coastal Impacts: Hazard Mitigation Planning & Climate Adaptation

Alyssa Newton Mann, Juliette Finzi Hart & Phyllis Grifman
September 30, 2015 | LA City Emergency Operations Center

Plan for today...

- Who is USC Sea Grant and how can we help?
- Quick overview of SLR
- Hazard mitigation and climate adaptation – How do they fit together?
- Lessons learned from around the country
- A bit on SLR & Storm modeling...more to come at next workshop
- Breakout exercise on mitigation/adaptation strategies

USC Sea Grant – The Urban Ocean Program

- Funds research
- Community outreach & education
- Technical assistance to local/regional government

10 Million by the Sea...

- Climate Change Science & Planning
- Coastal Ecosystem Science
- Coastal Management
- Maritime Affairs

USC Sea Grant – Climate Change & SLR Program

Regional AdaptLA: Coastal Impacts Planning in the Los Angeles Region

[Focus Areas](#) > [Climate Change](#) > [AdaptLA](#)

Los Angeles is known for its wide sandy beaches, coastal boardwalks, and beach commerce and tourism. However the impacts of climate change not only threaten our treasured beaches but also critical infrastructure, including power plants; sewage treatment plants; and two of the busiest ports in the U.S., along the coast. Planning for the impacts of climate change (adaptation planning) is therefore a priority for the region. To fully understand the impacts of climate change and how they can inform regional planning polices require a link between the best available scientific tools and local governments. *Regional AdaptA: Coastal Impacts Planning in the Los Angeles Region* is a multi-year project that strives to provide this link to local coastal jurisdictions and to develop a community of practice for the L.A. region.

Sea Level Rise 101

- Thermal expansion
- Melting of Glaciers & Ice Sheets
- Terrestrial Water Storage
- Tectonic Activity

Beyond SLR...

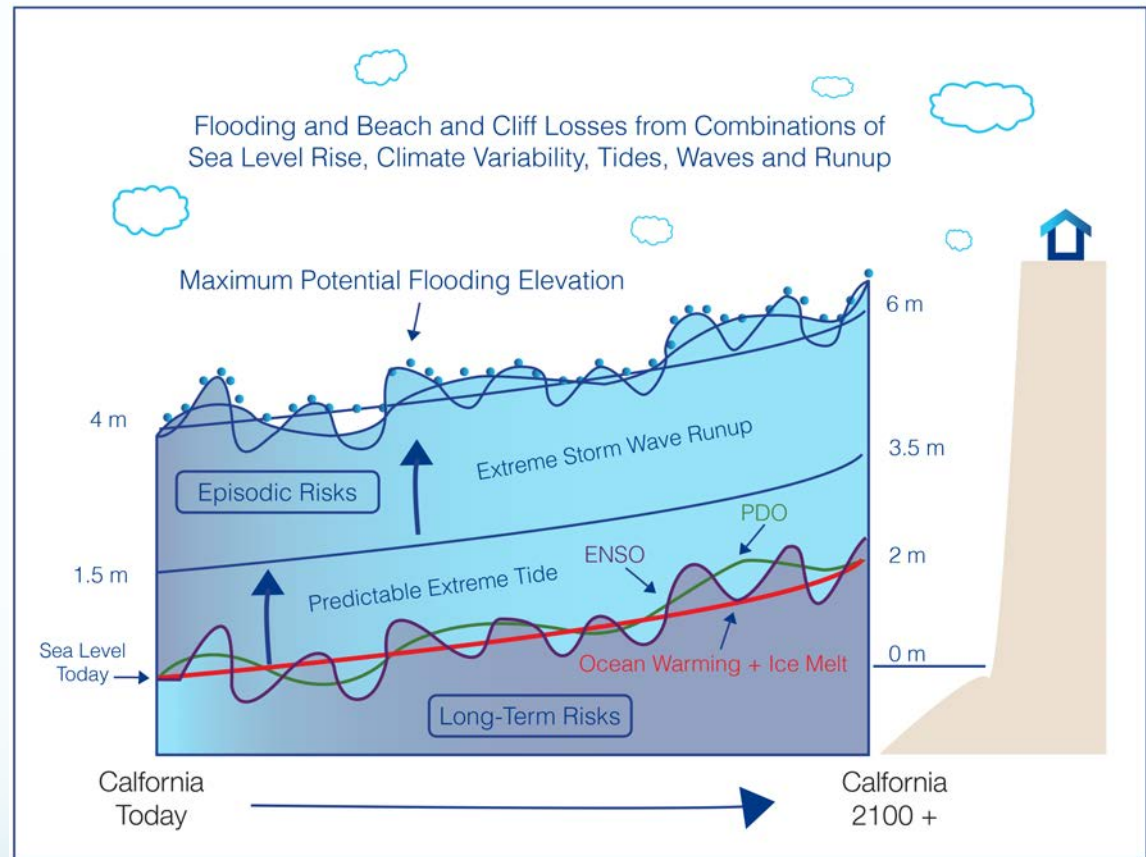

Hurricane Marie
September 2014

Coastal Storms

“Today’s storm is tomorrow’s high tide...”

Climate change is a potential amplifier of existing hazards

Expected Impacts from SLR and Storms

- Accelerated beach erosion rates
- Greater incidence of cliff failures
- Landward translation of coastal flooding & inundation
- Dangerous navigation conditions
- Beach/shore safety compromised
- Saltwater intrusion into coastal aquifers

Hazard Mitigation & Climate Adaptation

- Multi-Hazard Mitigation Planning: Identify policies and actions that can be implemented over the long-term to reduce risk and future losses.
- Climate Adaptation Planning: Adjustment or preparation of natural and human systems to a new or changing environment which moderates harm or exploits beneficial opportunities.

Planning Handbook, 2013;
Safeguarding California, CNRA, 2014

Hazard Mitigation Planning Tasks

Figure I-1: Local Mitigation Planning Handbook Tasks.

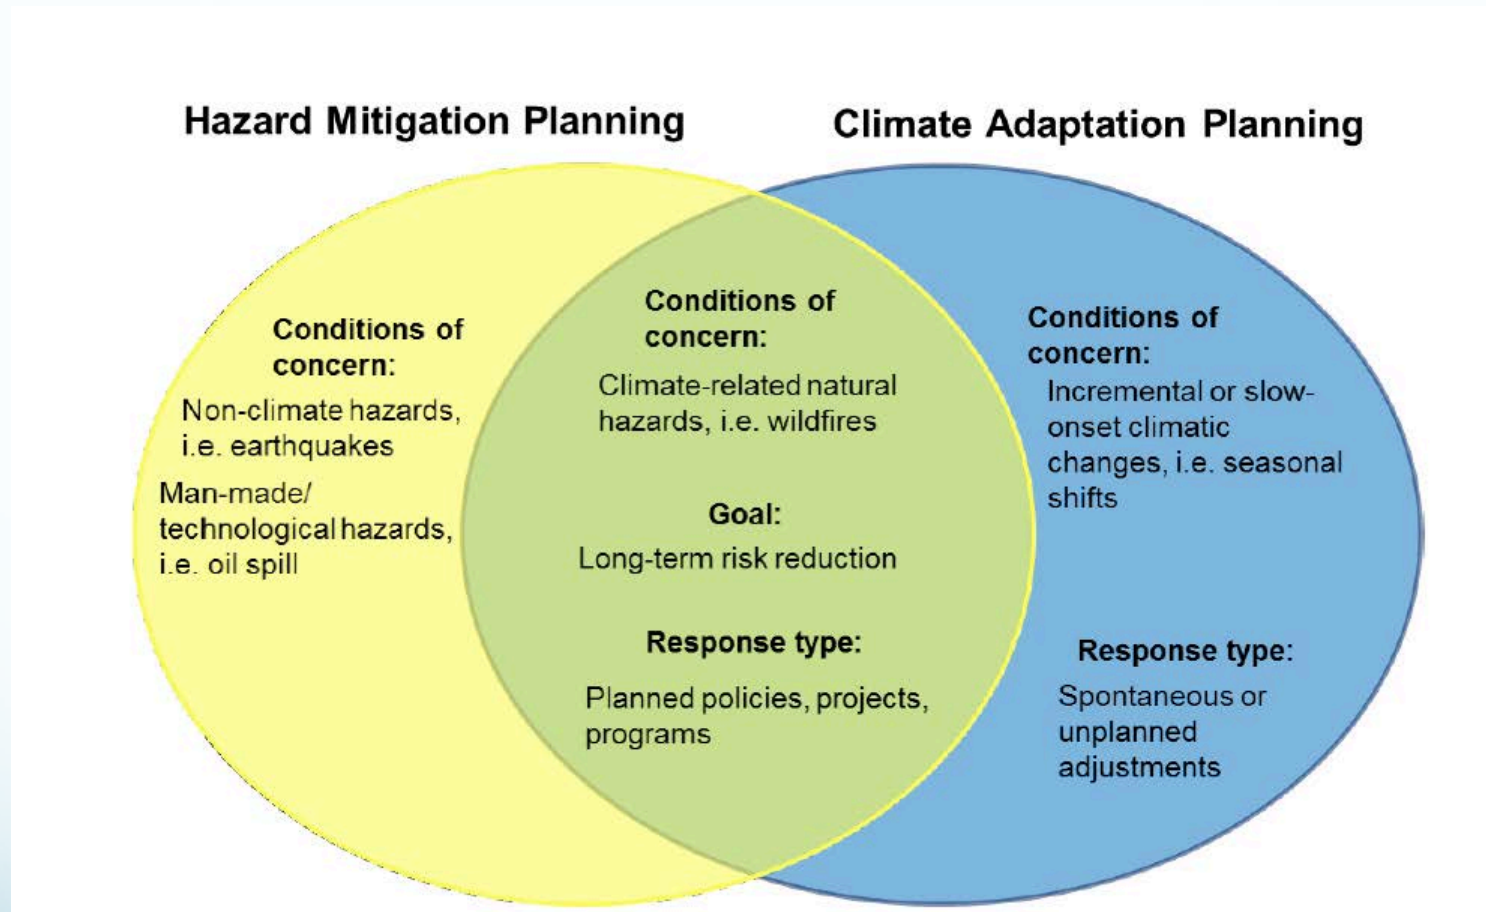

Source: FEMA Local Mitigation Planning Handbook, 2013

- Build planning team
- Create outreach strategy
- Review community capabilities
- Conduct a risk assessment
- Develop mitigation strategies

“Adaptive” Adaptation Planning

Hazard Mitigation & Climate Adaptation

Source: Melissa Higbee et al, ICLEI, 2014

Integrating HMP & Climate Adaptation

- No current mandate, but strong encouragement from FEMA and the state to incorporate climate change considerations into planning
- Clear opportunities to include climate in HMP process:
 - Ensuring the right stakeholders participate in the process
 - Conducting the Risk Assessment
 - Identifying mitigation strategies and priority activities
- However, challenges do still exist –
 - FEMA has not provided clear guidance
 - Questions about scenarios and planning horizons
- Your work here will help pave the way!

Lessons Learned Around the Country

- Having a broad stakeholder group at the table and keeping stakeholders engaged
- Opportunity to integrate plans (i.e. LCP and HMP)
- Terminology – ensuring everyone understands the lingo!
- Discuss Climate Change during Risk Assessment Phase

Getting the right people at the table

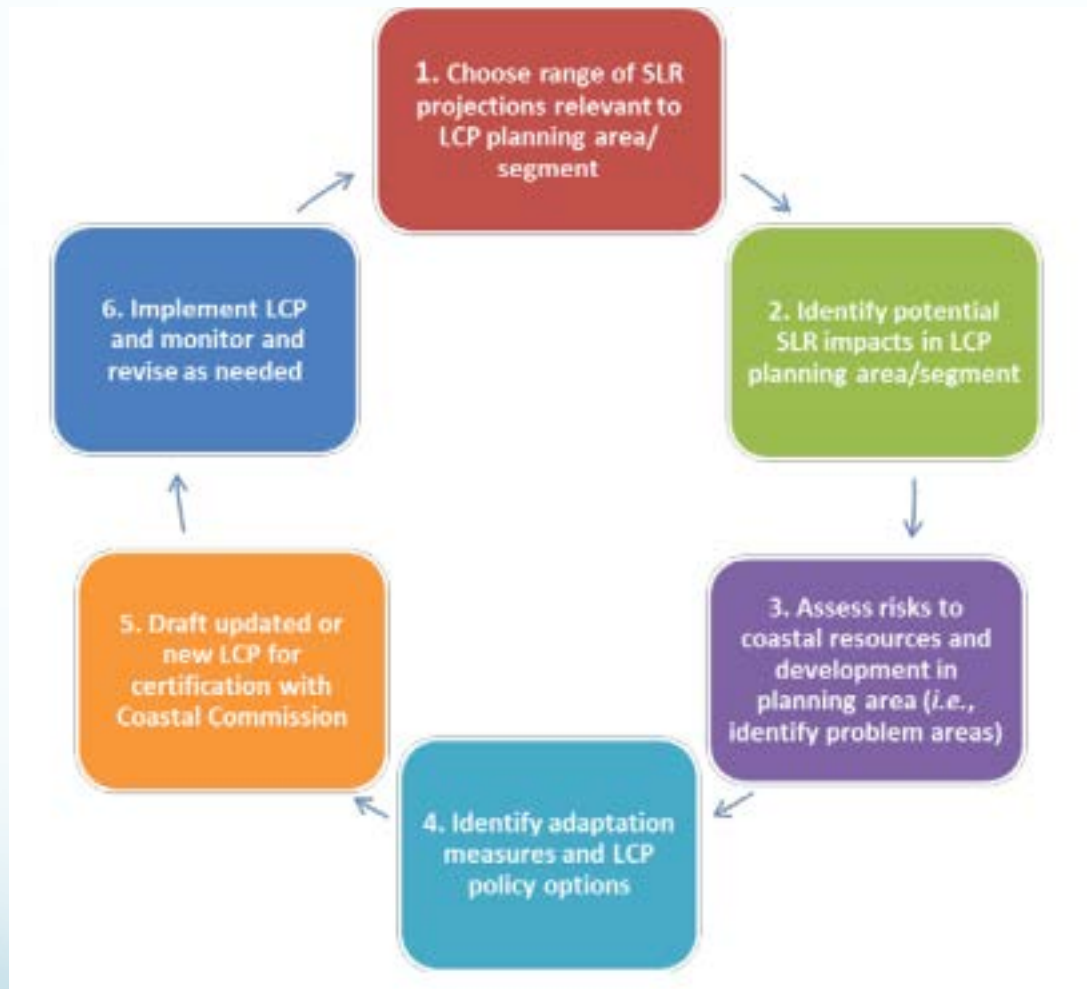

- Considering climate change may require broadening our stakeholder group
- Similarities between planning processes and information needed – HMP, LCPs, General Plan, and/or Adaptation Plan
- Who else should be here? What other organizations/agencies should be involved?
- Let's get these communities of practitioners together!

What is a Local Coastal Program (LCP)?

- LCPs are basic planning tools used by local governments to guide development in the coastal zone
- They contain ground rules for future development and the protection of coastal resources
- Must be consistent with the CA Coastal Act
- An LCP is submitted to the CA Coastal Commission and once approved, coastal permitting authority over most new development is transferred to the local government
- Many LCPs in the state are being updated -- new guidance from CCC on integrating sea level rise considerations into LCP

Stakeholder & Public Engagement

Political Leaders
City Councils
Sustainability Depts
Wastewater Treatment
Emergency Managers
Private Industry
Consultants
Public Utilities
Public Works
Harbor Depts
Planning Depts
Park Managers

NGOs
Academia
Educators
State Agencies
Federal Agencies
MPOs, JPAs, COGs
Museums, Aquariums
Community Organizations
Professional Associations
Regional Organizations
Neighborhood Councils
Social Justice Organizations

Let's Be Clear on Terminology

- i.e. Mitigation (hazard mitigation vs. climate mitigation)

climate and i

Carbon Sequestration This refers to the capture of CO₂ from the atmosphere and its long term storage in oceans (oceanic carbon sequestration), in biomass and soils (terrestrial carbon sequestration) or in underground reservoirs (geologic carbon sequestration).⁶⁰⁵

Climate Climate in a narrow sense is usually defined as the "average weather" or more rigorously as the statistical description in terms of the mean and variability of relevant quantities over a period of time ranging from months to thousands or millions of years. The classical period is 30 years, as defined by the World Meteorological Organization (WMO). These relevant quantities are most often surface variables such as temperature, precipitation, and wind. Climate in a wider sense is the state, including a statistical description, of the climate system.⁶⁰⁶

Climate Adaptation Adjustment or preparation of natural or human systems to a new or changing environment which moderates harm or exploits beneficial opportunities.⁶⁰⁷

Climate Mitigation A human intervention to reduce the human impact on the climate system; it includes strategies to reduce greenhouse gas sources and emissions and enhancing greenhouse gas sinks.⁶⁰⁸

Ecosystem Services Ecosystem services are commonly defined as the benefits people obtain from ecosystems. Ecosystem services include basic services - provisioning services like the delivery of food, fresh water, wood and fiber, and medicine - and services that are less tangible

Coastal Storms and SLR Modeling

The best of the best...

- Coastal Storms Modeling System
 - USGS, led by Dr. Patrick Barnard & Dr. Li Erickson
- Backshore Characterization & SLR Modeling
 - Revell Coastal and ESA, Dr. David Revell & Dr. Bob Battalio
- Shoreline Change Modeling
 - TerraCosta Consulting Group, Dr. Ron Flick & Dr. Adam Young

Coastal Storms Modeling System (CoSMoS)

- Dynamic - Physics-based numerical modeling system for assessing coastal hazards on West Coast
- Projects coastal hazards for:
 - Full range of SLR scenarios (0 – 2 m & 5 m)
 - Annual, 10 yr, 20 yr and 100 yr storms
- Decision support tools to meet local adaptation planning needs

How it all fits together...

- Better prediction of coastal storms under numerous SLR scenarios
- Better understanding of how beaches will respond to SLR and storms

Mitigation/Adaptation Strategies

1. Acquiring Scientific Information
2. Local Planning, Policies and Regulations
3. Structure and Infrastructure Projects
4. Natural Systems Protection
5. Education, Awareness and Community Engagement
6. Engage Stakeholders and Build Capacity for Local Agencies

Acquiring Scientific Information

Information needed to help inform local plans and decision-making

- Assessment of information needs of local entities
- Vulnerability assessments
- Cost-benefit analyses
- Engineering and geotechnical studies

Local Planning, Policies and Regulations

Policies, regulations and planning processes aimed at reducing or eliminating risk

- Policies to manage/restrict development
- Improve land use policies and regulations
- Promote or require standards in development
- Prevent new development in high risk zones

Structure and Infrastructure Projects

Hardening infrastructure and construction projects to reduce or eliminate risk

- Protecting critical infrastructure
- Manage retreat projects
- Flood control maintenance projects
- Floodproofing
- Retrofit

Natural Systems Protection

Nature-based solutions, that is, solutions that reduce social and economic risks and maximize the benefits that nature provides.

- Preserve High-Hazard Areas as Open Space
- Protect and Restore Natural Buffers
- Maintain Beaches
- Stabilize Erosion Hazard Areas
- Protect and Restore Natural Flood Mitigation Features

Education, Awareness and Community Engagement

- Engaging the public, enhancing awareness and education programs
- Educating property owners about risk
- Increase public awareness of hazard zones
- Educate and engage communities, especially vulnerable communities
- Engage formal and informal educators and students

Engage Stakeholders and Build Capacity for Local Agencies

- Provide opportunities for local planners and managers to learn about issues
- Engage a wide spectrum of stakeholders in planning processes
- Build governance structures
- Enhance local government coordination

Facilitated Breakout Exercise – Mitigation Strategies/Adaptation Strategies

- 30-minute exercise
- Breakout into groups of 4-5 people
- Take 10 minutes to fill out strategies matrix
 - Currently implementing, feasible, medium, not feasible/difficult
- Group discussion:
 - Are there categories or strategies missing?
 - What “mitigation” projects are currently going on in your agencies and departments? Do those fit into a strategy?
 - What strategies did you mark as feasible? Why? Are these priorities for L.A.?

Next Steps!

Thank You!
